

**REMARKS**

Applicants request entry of the amendment to the sequence listing submitted herewith. Applicant submits the substitute sequence listing to correct the sequence for RAP at SEQ ID NO: 1. The SEQ ID NO: 1 sequence as originally filed contained 320 amino acids. The substitute SEQ ID NO: 1 has 323 amino acids.

SEQ ID NO: 1 encodes the mature RAP protein lacking the signal sequence (see page 38, lines 23-25). Page 38, lines 5-10, refers to the SwissProt database entry for RAP, P30533, which describes a protein having 357 amino acids with a 34 amino acid signal sequence, resulting in a mature protein of 323 amino acids as set out in SEQ ID NO: 1.

The amendment adds no new matter.

Dated: April 16, 2007

Respectfully submitted,

By   
Katherine L. Neville
